SUMMARY

Backend-focused Java developer with hands-on experience building Spring Boot APIs, service workflows, reconciliation pipelines, and AI-assisted backend features. Focused on reliable architecture and predictable failure handling.

EDUCATION

Bachelor of Technology in Computer Science (IoT) Sep 2022 – Jul 2026
ABES Institute of Technology (AKTU) Ghaziabad, U.P.

EXPERIENCE

Aristiee Aug 2025 – Nov 2025 *Remote*
Java Developer Intern

- Contributed to backend module optimization and routine code maintenance in a software services environment.
- Worked on Java-based implementation tasks and assisted in debugging across active backend components.

PROJECTS

Order Processing Platform | *Java, Spring Boot, PostgreSQL, JWT, Docker*

- Built a three-service backend (**order**, **inventory**, **payment**) with JWT-secured APIs and consistent response envelopes.
- Implemented service-to-service orchestration for order creation, stock reservation, and payment capture.
- [GitHub](#) | [Live Health Endpoint](#)

Payments Reconciliation Service | *Java, Spring Boot, PostgreSQL, Scheduler*

- Built APIs to ingest gateway transactions and ledger entries, then reconcile by transaction ID and amount.
- Added manual/scheduled reconciliation runs with unmatched reporting in JSON and CSV formats.
- [GitHub](#) | [Live Health Endpoint](#)

AI Support Assistant API | *Java, Spring Boot, Retrieval, Prompting*

- Built a support draft-reply API with PII masking, retrieval-backed context, confidence scoring, and fallback handling.
- Returned metadata (**modelStatus**, **sources**, **piiMasked**) for safer support review workflows.
- [GitHub](#) | [Live Health Endpoint](#)

TECHNICAL SKILLS

Languages: Java, SQL
Frameworks & APIs: Spring Boot, REST APIs, JWT Authentication
Databases: PostgreSQL, MySQL
Tools: Git, Docker, Maven, Render, GitHub Actions (basic)
Concepts: Microservices, Service Orchestration, Reconciliation Workflows, Backend Reliability
